Subject: Proposed Yucca MT storage site

Part of Records Package / Supplement / Correction

Dear Sir or Madam,

As a resident of Henderson, Nevada I appreciate the chance our government has given the citizens to voice their opinion on something as important as storing nuclear waste.

Unlike many of my fellow citizens though, I am not having a knee-jerk reaction to oppose the project on an argument that I think is nothing more than the "NIMBY" syndrome. If geologically, Nevada makes the most sense to store waste, then this state, as a service to the others, should go ahead with the Yucca mountain project.

What upsets me the most, is that without even considering the idea, many people here just oppose it instantly and without offering any good reasons. To oppose it just because it is nuclear shows thier lack of understanding of the issue. Many of these same people, who suddenly find some new interest in their safety, are the same ones who will drive without safety belts on or smoke a pack of cigarettes a day! I think there are a lot more hazards out there than highly-contained nuclear waste, and we shouldn't let a bunch of professional protestors stop this project.
